An OSCP has demonstrated the ability to use persistence,  perceptiveness to identify vulnerabilities and execute organized attacks under tight time constraints. They can:

* Use information gathering techniques to identify and enumerate targets running various operating systems and services
* Write scripts and tools to aid in the penetration testing process
* Analyze, correct, modify, cross-compile, and port public exploit code
* Conduct remote, local privilege escalation, and client-side attacks
* Identify and exploit XSS, SQL injection, and file inclusion vulnerabilities in web applications
* Leverage tunneling techniques to pivot between networks

OSCP holders have also shown they can think outside the box while managing both time and resources.

Skills / Knowledge

Kali Linux · Network Vulnerability Scanning · Buffer Overflow Exploits · Exploitation · Client Side Attacks · Web Exploitation · Password Attacks · Pivoting · Antivirus Exploitation · Advanced Command Line · Practical Tools · Bash Scripting · Active Information Gathering · Passive Information Gathering · Vulnerability Scanning · Web Application Attacks · Windows Buffer Overflow · Linux Buffer Overflow · Locating Public Exploits · Fixing Public Exploits · File Transfers · Antivirus Evasion · Port Redirection · Tunneling · Active Directory Attacks · PowerShell Empire · Privilege Escalation · Metasploit · Port Scanning · Information Gathering
